SEA-MaP Regional Platform for Innovation and Investments

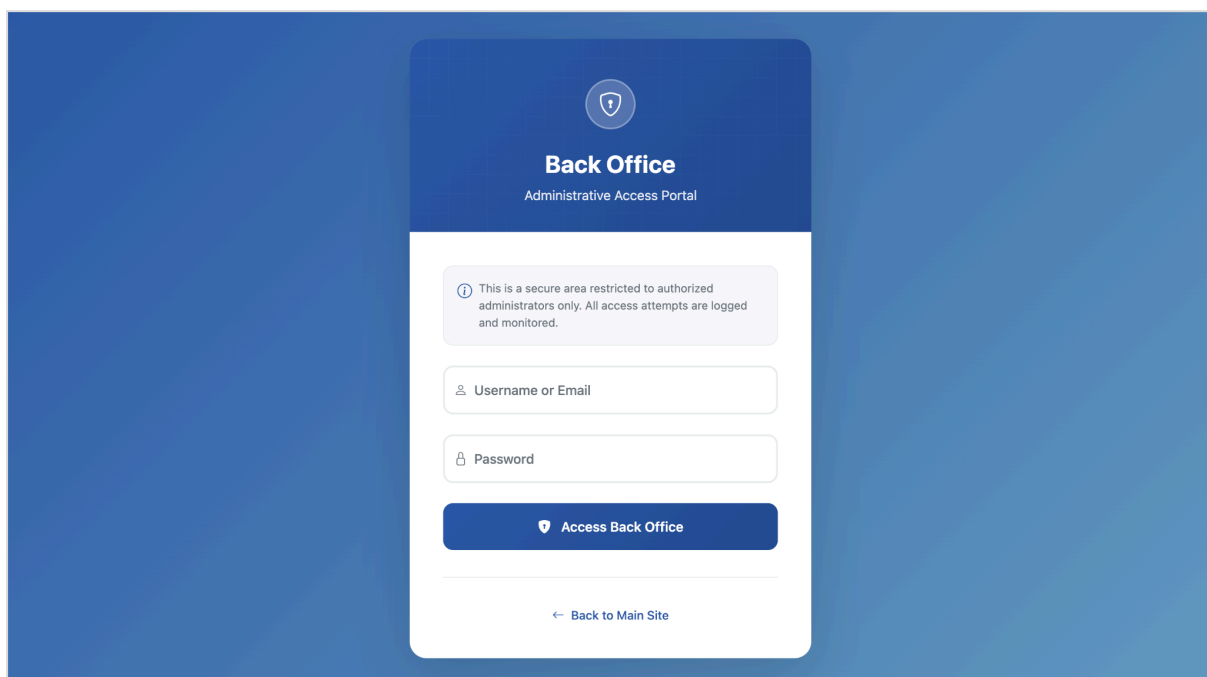

Back Office : Content Management Handbook

The SEA-MaP Regional Platform for Innovation and Investments is designed to ensure a secure, high-quality environment for all users. While many protections are automated, moderator review is essential for verifying critical information and maintaining trust. This handbook provides clear, step-by-step procedures for moderators using the Back Office system.

Part 1: Back Office Overview & Navigation

1.1 Logging In

- **Access the Portal:** Navigate to the **Back Office Administrative Access Portal**.
- **Authentication:** This is a secure area restricted to authorized administrators. Enter your **Username or Email** and your **Password**, then click the **Access Back Office** button.

1.2 Understanding the Sidebar Navigation Menu

Once logged in, you will see the main sidebar menu on the left, which is divided into several key functions:

● OVERVIEW

- **Dashboard:** Your starting point. It displays platform overviews and key metrics, including Total Members, Total Companies, Pending Verifications, and New sign-ups this week. It also lists "Recent Members" and "Recent Companies" with Quick Action buttons to manage them.

● USER MANAGEMENT

- **User Profiles:** Manage and view all registered member profiles, their contact info, profile status (Complete/Incomplete), and joined dates.
- **Company Profiles:** Manage all company profiles, search by name, or filter by Company Type (Startup, Corporate, Investor) and Profile Status.
- **VERIFICATION**
 - **Verification Dashboard:** An overview of the verification queue.
 - **User Verification:** The queue for reviewing and approving/rejecting user accounts.
 - **Company Verification:** The queue for reviewing and approving/rejecting company profiles.
- **DOCUMENTS**
 - **Document Dashboard:** A centralized view showing the total, pending, approved, and rejected numbers for both Member and Company documents.
 - **Member Documents:** Manage documents uploaded by individual users.
 - **Company Documents:** Review specific files uploaded by companies, such as Pitch Decks or Company Registrations.
- **CONTENT MANAGEMENT**
 - **Challenges:** General management for platform challenges.
 - **Innovation Challenges:** Manage and review "Problem Statements" submitted by corporate users before publishing them to the platform.

Part 2: Step-by-Step Verification Processes

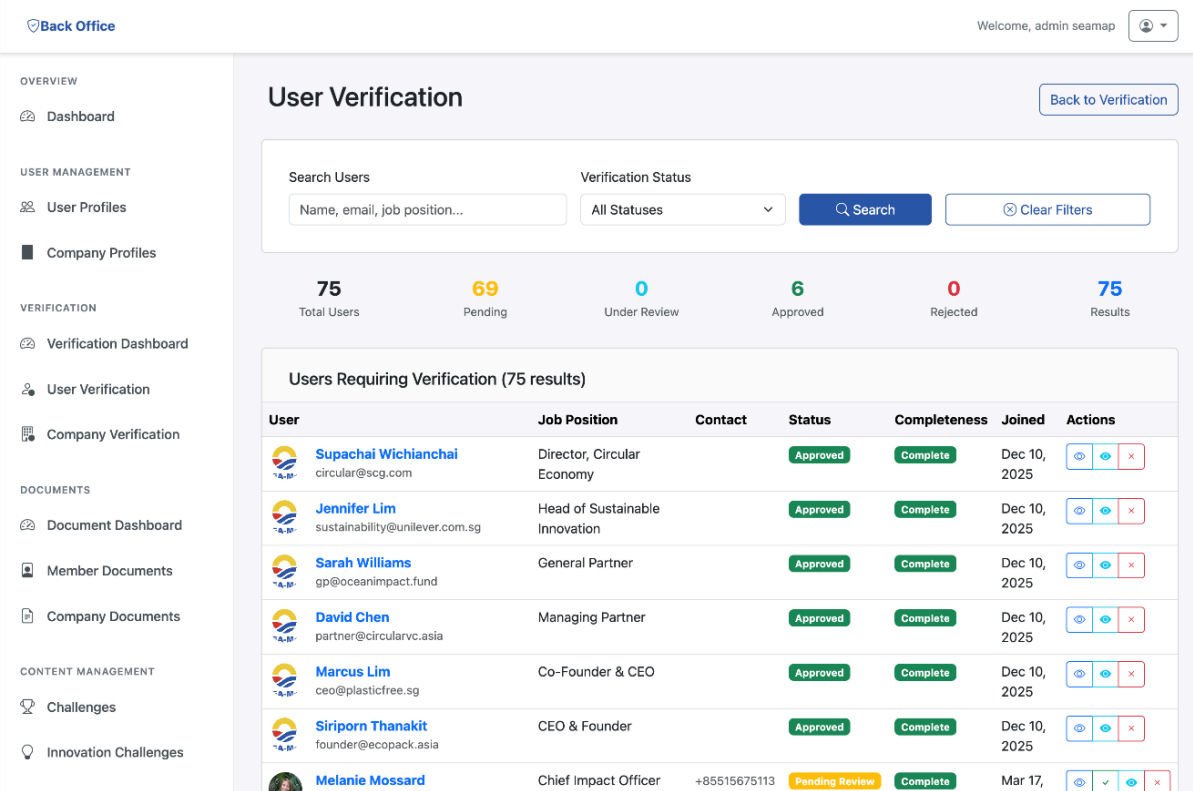

Service Level Agreements (SLAs):

- **Profile/Company Verification:** Within 2 business days.
- **Document Verification:** Within 3 business days.
- **Problem Statement Review:** Within 2 business days.

2.1 User Verification Process

To ensure only real, eligible users are approved and their information is accurate.

1. Access the Queue: Navigate to **VERIFICATION > User Verification**.

Back Office Welcome, admin seamap

User Verification [Back to Verification](#)

Search Users: Name, email, job position... Verification Status: All Statuses [Search](#) [Clear Filters](#)

 Melanie Mossard	Chief Impact Officer	+85515675113	Pending Review	Complete	Mar 17,	View Edit Reject

2. Review the Queue: You will see a list of users requiring verification. You can use the search bar or filter by "Pending" status.

- **Quick Action:** Click the **Checkmark (Approve)** or **X (Reject)** directly from the list, or click the **Eye icon (View)** for full details.

3. Check Profile Details: On the User Profile Details page, review the following:

- **Personal Information:** Check First Name, Last Name, Email, Job Position, and LinkedIn Profile. Ensure there are no offensive names and the email format is correct.

- **Profile Completeness:** On the right panel, verify that all checklist items (Name, Email, Phone, Job Position, Bio) have green checkmarks.
- **Duplicate Check:** Search the system to ensure there are no duplicate users with the same name or email.

4. **Make a Decision:** In the **Verification Status** panel:

- Click **Approve:** If complete, consistent, and eligible.
- Click **Under Review (Needs Info):** If missing details or clarification is needed.
- Click **Reject:** If there is clear misrepresentation or spam.

2.2 Company Verification Process

To ensure legitimate companies are approved without impersonation.

1. Access the Queue: Navigate to **VERIFICATION > Company Verification**.

2. **Review the Queue:** Find pending companies and click the **Eye icon (View)** to open their profile.
3. **Check Company Details:**
 - **Company Information:** Check Company Name, Type, Primary Location, Team Size, and Description. Ensure there is no impersonation of well-known brands.
 - **Startup/Corporate Information:** Evaluate details like Current Stage, Funding Needed, and Solution Description for consistency.
 - **Consistency:** Ensure company details match the User (Company Owner) information.
4. **Make a Decision:** In the **Verification Status** panel:
 - Click **Approve:** If all checks are passed.
 - Click **Under Review (Needs Info):** If additional documents are needed.
 - Click **Reject:** If fraudulent or ineligible.

Company Description

MYCL's mission is to create sustainable, high-performance materials that replace plastic and animal leather by harnessing the power of mycelium and agricultural waste. Our vision is to build a circular bioeconomy where farmers, brands, and consumers are connected through regenerative innovation — transforming waste into value while healing the planet. What makes MYCL unique is our deep integration of science, culture, and impact: inspired by Indonesia's heritage of mycelium fermentation like tempe, we've developed patented technology that turns local crop waste into Mylea™, a durable, low-carbon, and affordable mycelium leather that meets global fashion and tech standards.

Solution Description

MYCL's solution is Mylea™, a next-generation biomaterial made from mycelium and agricultural crop waste, designed to replace animal and synthetic leather. Our patented process transforms waste from local farmers into high-value, durable, and plastic-free materials through a low-energy, water-efficient. USP (Unique Selling Proposition): Mylea™ combines sustainability, performance, and affordability — it's 100% plastic-free, emits up to 95% less CO₂ than animal leather, uses no toxic chemicals, and offers comparable strength, flexibility, and texture to conventional leather at a competitive price of USD 5–15/sqft. This makes MYCL one of the few companies globally capable of delivering scalable, traceable, and truly circular leather alternatives for fashion, footwear, and tech industries.

2.3 Document Verification Process

To confirm the authenticity, relevance, and compliance of uploaded documents.

10

1. **Access the Queue:** Navigate to **DOCUMENTS > Company Documents** (or Member Documents).

Back Office Welcome, admin seamap

Company Documents
Review and manage company uploaded documents

Search: Search documents, company names... Status: All Statuses Document Type: All Types Filter

Company Documents 2 total

Document	Company	Type	Size	Status	Uploaded	Reviewed	Actions
LoopNet Pitch Deck PDF file	LoopNet Asia Startup	Pitch_Deck	2.66 MB	Pending Review	Mar 13, 2026 07:26	Not reviewed	
Company Registration PNG file	Innovation of Experience Co., Ltd. Corporate	Company_Registration	0.0 MB	Pending Review	Mar 13, 2026 06:40	Not reviewed	

2. **Select a Document:** Look for documents marked with the yellow **Pending Review** badge and click the **Eye icon (View)**.
3. **Review Document Details:**
 - Check the **Document Information** panel for Name, File Type (e.g., Pitch_Deck, Company_Registration), and Upload Date.
 - Scroll to the **Document Preview** section and click **View PDF** to read the file.
 - **Criteria:** Confirm the document matches the requested type, is clear and readable, is complete (all pages, signatures, dates), and is consistent with the profile. Ensure it is not expired.
4. **Make a Decision:** In the **Review Status** panel:
 - Click **Approve:** If authentic, consistent, and current.
 - Click **Mark Under Review (Needs Info):** If unclear, incomplete, or mismatched (request resubmission).
 - Click **Reject:** If forged, irrelevant, or fails policy.
 - Click **Mark Pending:** To revert to the pending queue.

2.4 Problem Statement (Innovation Challenge) Verification

Purpose: To ensure corporate problem statements are clear, relevant, and appropriate for publication.

1. Access the Queue: Navigate to **CONTENT MANAGEMENT > Innovation Challenges**.

The screenshot shows the 'Problem Statement Management' interface. The top navigation bar includes 'Back Office' and a user profile 'Welcome, admin seamap'. The left sidebar lists categories: OVERVIEW (Dashboard), USER MANAGEMENT (User Profiles, Company Profiles), VERIFICATION (Verification Dashboard, User Verification, Company Verification), and DOCUMENTS (Document Dashboard, Member Documents, Company Documents). The main content area is titled 'Problem Statement Management' with a subtitle 'Manage and review problem statements submitted by corporate users' and a badge '1 Total Problem Statements'. Below this is a search and filter section with 'Search Problem Statements' (input field), 'Status' (dropdown: All Statuses), 'Category' (dropdown: All Categories), and 'Search'/'Reset' buttons. A table lists the problem statements with columns: PROBLEM STATEMENT, ORGANIZER, STATUS, CATEGORY, CREATED, and ACTIONS. One entry is visible: 'AI-Powered Marine Plastic Waste Detection and Mon...' with status 'PUBLISHED' and creation date 'Mar 09, 2026'. An eye icon in the ACTIONS column indicates it can be viewed.

PROBLEM STATEMENT	ORGANIZER	STATUS	CATEGORY	CREATED	ACTIONS
AI-Powered Marine Plastic Waste Detection and Mon... Using AI, drones, or satellite data to detect and monitor m...		PUBLISHED	-	Mar 09, 2026 Published: Mar 09	

2. Select a Statement: Locate pending statements in the list and click the **Eye icon (View)**.

3. Review Content:

- On the Problem Statement Details page, read the **Problem Description**, **Solution Requirements**, and **Technical Requirements** panels.
- **Criteria:** Ensure the title and full description are complete. The content must be relevant to the platform's focus (e.g., plastic circularity), free of promotional or offensive material, clear, actionable, and free of ambiguous jargon.

4. Make a Decision: In the **Actions** panel:

- Click **Publish / Approve**: If complete, relevant, and clear.
- Click **Unpublish / Needs Info**: If clarification or edits are needed.
- Click **Reject**: If inappropriate, off-topic, or spam.

Title:

AI-Powered Marine Plastic Waste Detection and Monitoring

Subtitle:

Using AI, drones, or satellite data to detect and monitor marine plastic pollution in coastal areas.

Company:

[Innovation of Experience Co., Ltd.](#)

Solutions

Views

Problem Description

Marine plastic pollution is a growing environmental crisis across Southeast Asia, affecting coastal ecosystems, fisheries, tourism, and local communities. Governments, NGOs, and environmental organizations often lack accurate, real-time data on where plastic waste accumulates in rivers, coastlines, and open waters.

Currently, waste monitoring is mostly done through manual surveys, sporadic field observations, or fragmented reporting systems. This limits the ability of organizations to prioritize cleanup operations, track pollution sources, and measure the impact of waste management initiatives.

This innovation challenge aims to identify startups or technology providers that can develop scalable solutions to detect, monitor, and analyze marine plastic pollution using technologies such as AI, remote sensing, drones, IoT sensors, or data analytics platforms.

Solution Requirements

The proposed solution should enable organizations to detect, monitor, and analyze marine plastic waste across coastal and river environments.

Key capabilities may include:

- Detection of floating plastic waste using AI or computer vision
- Monitoring pollution hotspots using drones, satellites, or IoT sensors
- Data platform or dashboard to visualize plastic pollution trends
- Ability to integrate environmental and geospatial data
- Tools to support decision-making for cleanup operations
- Scalable deployment across multiple coastal regions

The solution should help stakeholders better understand pollution patterns and enable more efficient cleanup and prevention strategies.

Technical Requirements

Potential technical features may include:

- AI / Computer Vision for plastic detection in images or video
- Drone or satellite imagery processing
- GIS / geospatial data integration
- Cloud-based data platform or analytics dashboard
- API capability for integration with external environmental databases
- Mobile or web interface for field teams and decision makers

Solutions should be scalable and adaptable for use in multiple ASEAN countries.
